LEARN MORE ABOUT US

GGO International Management formulates and manufactures sustainable solutions for agriculture. Our products are an integral component for all types of agriculture conventional, organic and hybrid operations. GGO International Management's soil amendments, specialty fertilizers, non-toxic pest control are used worldwide. Our sustainable products bridge the gap separating high efficiency conventional farming from nutrient-dense organic crops; Our products and protocols provide farmers with ways to reduce input costs while increasing yields; helping - rebuild soils depleted or destroyed by years of unsustainable farming practices

HUMIS MATERIALS

Product Description

GGOIM Mini-Granule fine, coarse and blend products are suitable as a soil amendment, fertilizer enhancer and animal feed supplement. This product can also be used as a microbial growth promoter for soil remediation and waste treatment.

GGOIM Powder & Super-Powder can be used as a soil amendment, fertilizer enhancer and animal feed supplement. It can also be used as a microbial growth promoter for soil and waste treatment. In a full-scale processing plant, GGOIM Powder and Super-Powder can be extracted to make liquid products.

GGOIM Dry Soluble 80 can be used directly or diluted in water without any settlement. It is very effective as a soil amendment, foliar spray, fertilizer enhancer, hydrocarbon flushing agent and microbial growth promoter for soil remediation and waste treatment.

Agriculture

Farmers who like to get the most out of their land use GGOIM products to improve crop health and total yield. The potent benefits of GGOIM Humic in revitalizing soil and stimulating plant growth are evident 'from the ground up'...from more vigorous roots and stems to healthier leaves to more robust grains, fruits and vegetables. Potent performance from the ground up.

Benefits of Use

Humates have been shown to provide a significant increase in crop yields when combined with your current fertilizer program. A consistent result from all crops tested was increased root growth. Length, density, and radius of plant roots dramatically increased. Tests have shown that root system vigor is very important to the nutrient uptake capability of plants, as well as to the plant's ability to combat disease. In addition, plant stability is enhanced, and plants are better able to find and absorb water with a broad based root system. Humates have been shown to consistently improve the uptake of nutrients such as nitrogen, phosphorus, and iron, as well as innumerable trace elements essential for plant health.

Rebuilding
Soils For Health
Crops

This is due to the biochemically active nature of humic acid, and its ability to form both soluble and insoluble complexes with various metals, minerals, and organics. Nutrients are mobilized in forms that the plants can accept.

Humates can hold up to 20 times their weight in water. By enhancing the soil's ability to retain water, humate usage can reduce the need for crop irrigation.

Because of the chemical bonding interactions of humic acid, plants are able to grow in soil with more widely varying pH values. In addition the humic stimulation of microbial activity leads to a healthy soil biota which will ultimately bring the pH of the soil into a more normal range.

Application & Rates

- The application rates depend on usage - large creal crops, canonla, legumes, potatoes etc.. Please refer to our tech sheets or contact us for information on application rates.

Storage, Handling and Usage

- Store in dry area and dry condition

Sizes

Products are sold in the following sizes:

1 Metric Ton Bag

20 Feet Container

40 Feet Container

THE GGO WAY

GGO International are specialists in providing high quality business advice to all types of agricultural business. We have access to the most up to date information and industry ideas, and we continue to develop bleeding edge technology solutions for agricultre.

All advice given to clients is tailored to their specific needs.
